

Summer Session 1 (5/20/2019 – 6/17/2019)

PHIL 102: Introductory Logic

**Kay Cho | Mondays, Tuesdays, Thursdays and Fridays,
1-4PM**

Information is all around you, stored in books, computers, the rings of a tree, in your brain. Logic is the study of the most basic property of information: that you can put pieces of information together to make a new piece of information. This process is called inference and it is at the heart of what it means to be a thinker. In logic, we study inference but establishing precise rules for what makes a good inference. In this course you will learn principles of inference that will be useful to you in any activity that requires thought. You will improve your ability to make and evaluate arguments, and you will gain a greater appreciation for precision in language. (*Gen. Ed.: This course satisfies the Individual and Society requirement.*)

Summer Session 2 (6/20/2019 – 8/09/2019)

PHIL 101: Critical Thinking

**Bailey Szustak | Tuesdays and Thursdays, 10:45AM-
1:15PM**

Critical thinking will enable you to better understand, evaluate, and defend the beliefs that make up your worldview, as well as the competing beliefs offered by others. We will learn how to analyze, evaluate and criticize arguments. We will then apply these skills to various forms of reasoning offered in academic and non-academic contexts. These are the skills you need to do well in college and to ace tests like the MCAT and the GRE. (*Gen. Ed.: This course satisfies the Individual and Society requirement.*)

PHIL 102: Introductory Logic

Hashem Morvarid | Tuesdays & Thursdays 5:30-8PM

Information is all around you, stored in books, computers, the rings of a tree, in your brain. Logic is the study of the most basic property of information: that you can put pieces of information together to make a new piece of information. This process is called inference and it is at the heart of what it means to be a thinker. In logic, we study inference but establishing precise rules for what makes a good inference. In this course you will learn principles of inference that will be useful to you in any activity that requires thought. You will improve your ability to make and evaluate arguments, and you will gain a greater appreciation for precision in language. (*Gen. Ed.: This course satisfies the Individual and Society requirement.*)

PHIL 110: Philosophy of Love and Sex

**Alessandro Moscaritolo | Tuesdays and Thursdays,
10:45AM-1:15PM**

What is it to love someone as a lover rather than a parent, sibling, or friend? What is the nature of sexual desire; how does it relate to love, to sexual activity and sexual pleasure? Among the topics discussed are sexual intercourse, trans-gender identity, homosexuality, prostitution, pornography, incest, and rape. (*Gen. Ed.: This course satisfies the Individual and Society requirement.*)

PHIL 115: Death

**Seth Christensen | Mondays and Wednesdays, 5:30-
8PM**

There are few certainties in life, but one of them is that it ends. You, and everyone else you have ever met, will one day die. What does this mean for us? In this course, we take a philosophical approach to death. We ask questions like: Is immortality possible? Would immortality be desirable? How should I feel about my own death? How should I feel about the death of other people? How should the knowledge that I will die affect

how I live?(*Gen. Ed.: This course satisfies the Individual and Society requirement.*)

PHIL 116: Medical Ethics

**Tony Hernandez | Mondays, Wednesdays and Fridays,
12-1:40PM**

Moral issues as they arise in medical contexts, including such topics as abortion, euthanasia, paternalism, allocation of medical resources, and psychiatric issues.
